Jersey game voting page

Many mobile game developers strive to ensure that their creations gain widespread popularity and fame among gamers around the world. Jersey Software took on this task - to collect the votes of ordinary players and, based on their number, bring these games to the top. To keep the top constantly updated, each individual player will have the opportunity to cast one vote per day. Moreover, each vote will have its own retention period, set at one week, after which it will disappear from the archive. This system ensures that Jersey Software always has the most up-to-date information about gamers' favorites.

What makes Jersey Software truly remarkable is that it offers its services completely free - we have a vested interest in growing the gaming community. Any game developer can add their game to our extensive database. The developer's interest is to attract a player from the community of his game, asking for his support by voting in our system.

In addition, Jersey Software also provides advertising opportunities. Developers can take advantage of the opportunity to place unobtrusive banners on the side inviting players to try the games they recommend. These banners will serve as invitations only and will never affect the vote count. Our commitment is to maintaining the integrity of the gaming ecosystem by helping developers and players interact seamlessly with each other.

❖ Use-case Voting

Before voting, visitors need to be verified. This can be done exclusively using a login through your Apple or Android (Google) account. The user will need to find his favorite game through a search (It is expected that he will go to the voting page through the link specified in the game). Next, the visitor will have to watch a short advertisement (5-15 seconds) and vote will count only after viewing it. The vote is added to the Database and a timer begins, during which the user will not be able to vote. Jersey will also send a message to the Game Creator that User N voted for his game (Just in case Game Creators want to reward their loyal players).
